

Motif reproduces all the special features of the classic Calacatta Gold marble of Italian tradition. The vein, color, tactile sensation and visual impact all reflect the beauty of this noble stone with its bright white background and warm veining. With the Natural (honed) and Polished finishes, and multiple sizes and mosaics, Motif offers a full range of options within this one color series.

3 x 12 - Available in Natural and Polished

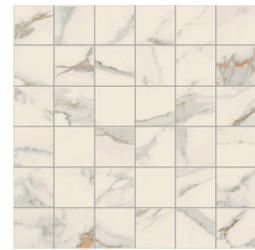

12 x 24 - Available in Natural and Polished

24 x 48 - Available in Natural and Polished

Mosaics - Available in Natural finish only

2 x 2

4" Hex

Colors are intended as a guide only and may vary from actual tile. Sizes listed are nominal. Please check samples before making final selection and to get actual dimensions for layout.

COLORS

Calacatta Gold MCMFCG

SIZES (Rectified)

Natural Finish		Polished Finish	
12 x 24	MCMFCGN/1224	12 x 24	MCMFCGP/1224
24 x 48*	MCMFCGN/2448*	24 x 48	MCMFCGP/2448
3 x 12	MCMFCGN/312	3 x 12	MCMFCGP/312

* The 24 x 48 Natural is a larger caliber and is not modular with the other sizes.

Like real stone, some pieces have more veining than others and vary within each carton. It is important to mix tile within each carton and blend tile from several cartons. We suggest laying out an area before starting installation, to attain the proper mix of veining. The cut sizes may have small irregularities due to the manufacturing process.

MOSAICS (Natural Finish)

4" Hex MCMFCGN/4HX
 2 x 2 Mosaic MCMFCGN/22

Due to the special packing required for the large format tiles, orders for the 24x48 size must be for full box quantities only & we are not able to fill orders on the same day as placed.

TRIM

Natural Finish		Polished Finish	
4 x 24 Surface Bullnose	MCMFCGN/SBN	4 x 24 Surface Bullnose	MCMFCGP/SBN

The surface bullnose is made from field tile that is cut, ground and reglazed.

COORDINATING TRIM

Natural Finish		Polished Finish <i>(Glazed with shiny glaze to coordinate with the Polished field.)</i>	
12" Quarter Round	MCMFCGN/A112	12" Quarter Round	MCMFCGP/A112
Beak	MCMFCGN/AC112	Beak	MCMFCGP/AC112

USAGE

Natural finish is suitable for both residential and moderate commercial installations. The Polished finish is suitable for walls and for residential and light commercial floors that do not require DCOF.

INSTALLATION

To attain the proper mix of graphics and color, it is important to pull from multiple boxes during installation, rotate pieces, and note the placement of the different images to get the proper final blend.

Most Italian manufacturers recommend a maximum offset of 8" (20cm) on all large format tiles when setting a running bond. Please refer to ANSI requirements for setting large format tiles, ANSI A 108.2 Section 4.3.8. There are special setting requirements and materials for large format tiles. Please refer to the TCNA Handbook and guidelines by your mortar manufacturer for more information. Using a leveling system can improve the installation of this product.

POLISHED FINISH

As with all shiny material, the polished surface is susceptible to scratching during installation and use, and extra care should be taken when handling the material. The factory does not recommend using an epoxy based grout because it can be very hard to remove from the surface of the tile during grouting. They also do not recommend using a sealer on the polished tiles.

Polished material can be etched with acids. Avoid detergents, solvents or acid-based products containing hydrochloric acid, citric acid, acetic acid or abrasive components. Do not use cleaning agents like abrasive cleaners which might scratch the surface. It is advisable to test a small area in a not highly visible section of the tiles before proceeding to clean the whole surface.

PHYSICAL CHARACTERISTICS - Natural Finish

Physical Properties	Norms	Value
Water Absorption	10545-3	<0.5%
Frost Resistance	10545-12	Resistant
Slip Resistance	DIN51130	R9
DCOF	BOT 3000 STANDARD ANSI A137.1:2012	Conforms

The Dynamic Coefficient of Friction is a general guide only. Testing may vary with different production runs and with different testing labs. As noted in the American with Disabilities Act (ADA) the coefficient of friction varies considerably due to facts not under the control of entities such as the manufacturers and distributors. These factors include, but are not limited to, contaminants, slope of terrain, drainage conditions, adjacent surfaces, etc. Suitability for any installation can only be determined by a site examination of all conditions that could affect the slip resistance of the tile being installed. Continual cleaning and maintenance must be performed once the tile has been installed.
